

Protect Your Investment

Whether your air supported structure serves your business as your central facility or is a part of a network of buildings that your business operates, it's an important investment that you want to be sure to protect. Just like conventional buildings, air structures can be insured too.

Coverage You Can Count On!

Protect Your Investment!

Whether your air supported structure serves your business as your central facility or is part of a network of buildings that your business operates, it's an important investment that you want to be sure to protect. Just like the brick-and-mortar or other 'conventional' type of building, air structures can be insured by most insurance providers.

Arizon has partnered with **Charles L. Crane Agency** to help guide our clients through the process of insuring their domes. Arizon's sales team can connect clients to an experienced insurance representative who will take the time to answer their questions about what information an insurance company will need in order to prepare a policy for purchase.

Insurance Claim Preparation

Hit by an unexpected storm and need to prepare an insurance claim for your air supported structure? Arizon provides inspections to air structure owners to check for structural damage, or damage to the dome's mechanical equipment. Contact Arizon's customer service department at (314) 605-0051 to schedule your dome assessment, or to ask for help in preparing an insurance claim on a damaged dome.

Routine Maintenance is Key

Insurance is important to have in an emergency, but the best way to increase the lifespan of your dome is with routine maintenance and upkeep. Call Arizon to schedule your annual inspection or to discuss any questions you have about operating your dome.
