NETTING & DIVIDERS

NETTING & DIVIDERS

Retractable netting, divider wall curtains, and walkway netting allow dome owners to divide their space as desired. This affordable upgrade can keep players and spectators safe or divide the space in order to offer multiple activities at the same time.

DIVIDER NETTING

Netting enables dome owners to break down their vast open-span floor space into multiple areas so that a variety of activities can be offered at the same time safely and uninterrupted. Retractable netting offers additional flexibility, giving owners and program directors the option of either using the whole dome for a single activity or to split the space into several fields, courts, or practice areas.

SAFETY NETTING

For certain applications like driving ranges and paintball courses, safety netting that keeps small, quickly-moving projectiles from hitting the interior fabric is recommended to ensure the longevity of the architectural fabric.

DIVIDER CURTAINS

Divider curtains (sometimes called “divider walls”) completely bisect the dome to substantially partition the space. Formed by a panel of fabric that runs from floor to ceiling and across the dome’s width, divider curtains can create supplemental spaces for weight training, office space, batting cages, driving ranges, exposition space, and more.

WALKWAY NETTING

Walkway netting creates a clear pedestrian path from doors and entryways, keeping spectators and athletes safe from sports projectiles while navigating through the facility.
