## WALKWAYS AND VESTIBULES

### WALKWAYS AND VESTIBULES

Arizon air supported buildings can connect directly to a frame walkway or a vestibule to provide a path for visitors to and from other buildings.

Arizon often incorporates covered frame walkways or vestibules into the design of air-supported buildings that are located some distance from a conventional structure that houses amenities such as reception desks, changing areas and restrooms. These corridors are particularly useful for applications like swimming, tennis, and sand volleyball where participants would typically prefer to wear warm weather clothing, but would not want to be exposed to cold temperatures or precipitation when walking between facilities. The modular construction of these walkways allow for custom lengths and simple, compact installation and storage for seasonal use.
